K M ANIL KUMAR

anil632514@gmail.com | +91 8861691360 | LinkedIn | GitHub | Bengaluru, India

SUMMARY

Engineering graduate (Computer Science) with hands-on experience designing, building, and deploying cloud-native systems on AWS — from backend services, REST APIs, and CI/CD pipelines to **Generative AI, RAG, and multi-agent architectures**. Skilled across **Amazon Bedrock, Kubernetes (EKS), Docker, and LLM orchestration**, with a track record of shipping production-oriented infrastructure for a multi-tenant SaaS platform supporting chat and voice agents.

EDUCATION

Bachelor of Engineering – Computer Science and Engineering *2022 – 2026*
K S Institute of Technology, Bengaluru | VTU | **CGPA: 8.9/10**

TECHNICAL SKILLS

Languages: Python, SQL
Backend & APIs: FastAPI, REST API Design, Authentication & Access Control
AI/ML: Generative AI, LLMs, RAG, NLP, Prompt Engineering, Fine-Tuning, Embeddings, Semantic Search
Cloud (AWS): Bedrock, SageMaker, S3, EKS, EC2, ECR, VPC, ALB, RDS, Secrets Manager, IAM
Databases: PostgreSQL, MongoDB, Vector Databases
DevOps: Git, GitLab CI/CD, Docker, Kubernetes
AI Tools: Ollama, OpenRouter, Groq, TrOCR, OpenCV

WORK EXPERIENCE

AI/ML Engineer Intern – PromptIQ *2026*

- Built **PromptIQ Studio**, a multi-tenant SaaS platform enabling organizations to create configurable **chat and voice agents** powered by Retrieval-Augmented Generation (RAG).
- Designed and implemented the AWS-based RAG pipeline, using **Amazon S3** for data storage and **Amazon Bedrock** for embeddings, vector search, and LLM-based retrieval and generation.
- Deployed and operated the platform on AWS using **EKS, EC2, ECR, VPC, ALB, RDS, and Secrets Manager**; built **GitLab CI/CD** pipelines for automated build, test, and deployment.
- Integrated voice agents with **Sarvam APIs** for speech-to-text (STT) and text-to-speech (TTS), and built agent tool integrations including **Gmail, Google Calendar, Slack, and Google Sheets**.
- Implemented **organization-level access control, role-based permissions** (Admin, Editor, Viewer), and team member management across a multi-tenant backend.

PROJECTS

LLM Fine-Tuning on AWS SageMaker

- Fine-tuned a foundation model using **Amazon SageMaker** through custom training and SageMaker JumpStart, covering preprocessing, hyperparameter configuration, training, and evaluation.

Local RAG-Based AI Chatbot GitHub

- Built a privacy-focused local **RAG chatbot** using **FAISS, Ollama, Phi-3 Mini, and Nomic Embed Text** for embeddings, semantic search, and local LLM inference.

AI-Driven Answer Script Evaluation System GitHub

- Developed an OCR and NLP pipeline using **TrOCR** and text similarity techniques to extract, compare, and automatically score handwritten answers.

CERTIFICATIONS

IBM SkillBuild – Data Analytics (ICT Academy) | **Infosys Springboard** – Python, Machine Learning and OOP
